

EXERCISE 2A

Directions : Each of the following questions consists of two sets of figures. Figures A, B, C and D constitute the Problem Set while figures 1, 2, 3, 4 and 5 constitute the Answer Set. There is a definite relationship between figures A and B. Establish a similar relationship between figures C and D by choosing a suitable figure (D) from the Answer Set.

- 102. (J): The pentagon gets inverted and the black figure is placed inside it, touching the upper boundary. Also, the lower half of the black figure becomes white.
- 103. (5): The two central figures are inverted and joined to form a single figure which is placed on the L.H.S. The next two similar figures are laterally inverted and joined to form a single figure which after rotating through 90° is placed in the lower right corner. One of the remaining two identical figures is lost and the other is placed in the right corner.

- 104. (3): The symbols move in the order 
The triangle rotates 90° ACW; the pin rotates 90° CW and the other two symbols get laterally inverted.

- 105. C4): The figure rotates through 135° ACW
- 106. (5): Fig. (B) contains both the inverted and the laterally inverted images of fig. (A).
- 107. «): The fig. rotates 90° CW. If an arrow is attached to the main fig. then, it is converted to a pin and two arrows are introduced on either sides of the pin. On the other hand, if a pin is attached to the main fig. then, it is replaced by an arrow and two pins are introduced on either sides of the arrow.
- 108. (4): The fig. rotates 90° ACW and the arrow gets detached from it. The arrow gets inverted and the remaining part of the fig. gets laterally inverted.
- 109. (3): The first, second, third and fourth symbols become fourth, third, second, and first respectively. The third symbol gets inverted and the fourth symbol becomes black.

- 110. (4): The symbols move in the order 

- The symbols that reach the central upper and central lower position, get inverted
- 111. (5): The figure at one of the corner* move* to the adjacent side CW and the big and small semi-circles interchange positions. The other fig. rotates 90° ACW and moves to the adjacent side CW, and the bent pin gets inverted.
- 112. (5): The fig. rotates through 180°. The arrowhead gets inverted. The semicircle enlarges and the square reduces in size.
- 113. (1): The fig. rotates 90° ACW and then gets inverted. The larger figure reduces in size and the lower figure enlarges.
- 114. (/): Two of the circles are converted into black triangles.
- 115. (3): The inner figure is replaced by a figure with one less number of sides. The outer figure rotates 90° ACW and in each of the white rectangles, the outer halves become black.
- 116. (3): One arrow is shifted to the top over the circle, with reversed direction.
- 117. (2): The curved parts in the two figures are lost and the remaining parts are made to intersect.
- 118. (2): The inner figure is rotated 45° CW and then inverted. The outer figure is rotated 45° ACW and then inverted.
- 119. (5): The figure rotates 45° CW and the dots outside the main figure move to the other sides of the line.
- 120. (5): The figure rotates 90° CW and gets inverted. The smaller and the larger curved portions interchange positions and the symbol inside the fig. is replaced by a new one.
- 121. (5): The figure rotates 90° ACW. The black portion becomes white and vice-versa.
- 122. (5): The figures formed by rotating fig. (A) through 90° CW and through 90° ACW are collected to form fig. . In a similar manner fig. (C) gives fig. (5).

Hidden page

138. (2): The figure rotates through 180' and three lines forming a zig-zag, get attached to its lower end.

139. (4): The symbols move in the order **v i**

The symbol that reaches the central position rotates 90' CW and its arc gets inverted; the 'F' shaped symbol rotates through 180'; the 'C' shaped symbol rotates 90* CW; the 'S' shaped symbol gets laterally inverted and the fifth symbol gets replaced by a new one.

140.(2) : The figure gets laterally inverted; the white end becomes black; the black end becomes white and the circle becomes black if initially white and becomes white if initially black

141. (3): Fig. rotates 90° CW and the dot and the cross interchange positions.

142. (4): The symbols move in the order **u :**

The symbol at the top right corner gets replaced by a new one.

143. (3): Each of two incomplete squares towards the upper side gets laterally inverted. The square at the lower left corner loses two of its sides while the one at the lower right corner loses one side.

144. (3): The upper and the lower symbols interchange positions. The symbol that reaches the top gets laterally inverted; the second symbol gets inverted and the third symbol rotates 90* CW.

145. (5): The lower figure rotates through 180' and the upper figure rotates through 135' CW and gets inverted.

148. (J): The figure rotates 135' ACW. The triangle, arrowhead and the arc get inverted.

147. (5): The main figure gets rotated through 180* and its hooks get inverted. The arrow rotates 135' ACW.

148. (2): The figure rotates through 180' and a line is added to the lower part of the figure obtained.

149. (2): The symbols move in the order 

The symbol that reaches the top-left position turns white; the symbol that reaches the lower-left corner rotates through 45'; the symbols at the top and middle positions in the central column rotate through 90' CW; the symbol at the lower position in the central column gets laterally inverted and a new symbol replaces the symbol in the top-right corner

150. (2): The symbols move one step downwards and the lowermost symbol reaches the top. The symbol that reaches the top position, gets inverted; the second symbol from the top, rotates through 90*; the third symbol becomes black and the fourth symbol rotates 90* CW.

151.(2): The symbols move one step upwards and the topmost symbol becomes the lowermost. The symbol that reaches the top, gets inverted and turns black and the symbol that reaches the lowermost position gets inverted.

152.(5) : The fig. rotates 90' ACW and the white symbols turn black while the black symbols turn white.

153. (4): The pin and the arrow move to the adjacent side in an ACW direction. Out of these two, the one which was inside, comes out and the other which was outside gets in.

154.(J): The fig. rotates 135' ACW. The 'S'-shaped symbol gets laterally inverted and comes out near the base of the triangle. The square moves to the other side of the triangle and gets black. A new symbol V appears inside the triangle and a small triangle appears outside the larger triangle

155.1-/: The symbol move in the order **M**

The clamp and arrow rotate 90' ACW; the pentagon and pin rotate 90' CW and the 'N' shaped symbol get* inverted.

156. (3): The symbols in fig. (A) move in the order  and a new symbol appears in central right position to give fig. (B). The lateral inversion of this order i.e. the order with the appearance of a new symbol at the central left position gives the answer fig. from fig. (C).

157. (5): The symbols move in the order

The symbol that reaches the top- left position, gets inverted; the symbol in the lower left corner rotates through 45'; the symbol in the upper-right corner gets inverted; the symbol in the lower-right corner rotate* 90' ACW and the central symbol rotates 90' CW.

158. (5) Out of the two parallel lines, the larger line gets converted to an arrow and the smaller line gets converted to a pin. The third line is replaced by a triangle.

159. (3): The symbols move in the order 

The symbol that reaches the top- left corner rotates through 90"; the symbol that reaches the central and the right positions in the middle row, rotates 90' ACW; the symbols that reach the central & right positions in upper row rotate through 45\ the symbol that reaches the lower right corner rotates 90* ACW and a new symbol appears in middle-left position.

160. (5) The upper and the lower parts of the figure get separated. Shading is removed from the upper part and the lower part is inverted. The two parts are then placed side by side.

161. (1): The symbols move in the order 

The symbol that reaches the top- left corner rotates 90' ACW; the symbol in the top-right corner rotates through 45"; the symbols in the lower-left corner and in the central positions rotate 90' CW and the symbol that reaches the lower-right corner rotates through 90*.

162. (5) The figure gets laterally inverted. The dot on the larger arc, the pin and the small arc rotate 90' ACW. Also, the pin gets inverted.

163. (3): The figure rotate® 90' CW. One half of one of the lines on the arrow is lost. The figure in front of the arrowhead rotates through 45".

164. (4): The missing line segment in (A) is replaced in (B). Then moving ACW, the third line segment is removed along the two next consecutive sides of the square. Shaded portion in (A) moves three steps ACW. Similarly, fig. (C) gives fig. (4)

165. (4) Each part of the figure rotates 90' CW and also moves two steps CW.

The lower & L.H.S. portions rotate 135' ACW; the R.H.S. & the upper portions route through 180\

166. (3) All the arrows get laterally inverted and the uppermost and the lowermost arrows interchange positions.

167. (5) The symbols move in the order -

168. (2)

The triangle & pin rotate 90° CW; the square and the V symbols rotate through 45° and the trapezium got* inverted.

- 109. (2): The innermost symbol rotate* 135° ACW, the arc at its one end gets replaced by a black triangle and the black circle is replaced by a white circle and this symbol gets enlarged. The middle symbol gets diminished and inverted and appears on the lower side. The outermost symbol gets diminished and inverted and appears on the upper side.
- 170. (3): The figure gets laterally inverted and the inverted image of the figure formed, gets attached to it.
- 171. (2): The symbols move in the order

The symbols that reach the upper position in the leftmost column, middle and lower positions in the middle column, middle position in the rightmost column rotate 90° CW. The symbol that reaches the lower position in the leftmost column rotates through 45° and a new symbol appears in the middle position in the leftmost column. The symbol in the lower position in the right most column rotates 90° ACW.

- 172. (5): The symbols move in the order **IT:** and a new symbol appears in upper-right corner, to give fig. from fig. (A). The movement of symbols in the order **n** (obtained by rotating the initial order 90° CW) and the appearance o a new symbol in the lower right corner, gives the answer figure i.e. fig (5) from fig (C).

- 173. (2): The symbols move in the order **h**
The T-shaped symbol gets inverted; the damp and the arrow rotate 90° ACW; the pin and the pentagon rotate 90° CW.

- 174.(4): The contents of the hexagon rotate one step CW and the diagonally opposite symbols interchange positions.
- 176. (4): The figure rotates 45° CW and then turns about the arrow. The arrow also gets reversed.
^
- 176. (2): The fig. gets laterally inverted and the arrowhead or the arc reverses in direction.
- 177. (2): The main figure gets inverted. The end of the lamp which is white turns black and the other end turns white The circle turns black, if initially white and it turns white, if initially black. The arrow at the bottom route© 90° CW and the square rotates through 45°.

- 178. (/): The symbol move in the order **M**
The 'C and 'S' shaped symbols get laterally inverted The triangle rotates 90° ACW; the hook rotates 90° CW and the fifth symbol rotates 45° ACW

- 179.(5): The symbols move in the order **S**
The symbol that reaches the lower- right corner got* rotated 90° ACW; the symbols that reach the upper-left and upper-right positions, get inverted; the central symbol rotates 90° CW and the symbol that reaches the lower* left corner rotates through 45°.

180. (J): The symbols move in the order 
- The triangle rotates 90° CW; the square and the arrow rotate 90° ACW and the fourth symbol gets inverted
181. (2): The symbol moves to the diagonally opposite quadrant. Out of the two similar figures, the inner one is removed and the outer figure is made dotted
182. (5): The lines carrying the circle and the bar rotate through 180° while those carrying the square and the arrow rotate 135° ACW.
183. (3): The figure gets laterally inverted and all the arcs reverse their directions
184. (5): Each one of the squares rotates 90° ACW.
185. (2): The figure rotates 45° CW and gets inverted. The arrowhead, then, gets inverted
186. (1): The lower-right symbol enlarges and comes to the centre and the upper left symbol enters it. The other two symbols interchange positions. The symbol that reaches the top-right position rotates 90° ACW while the symbol that reaches the lower-left position rotates 90° CW.
187. (2): In the two figures, the portions in which no lines are drawn are removed and the resulting figure is rotated through 180°. In the L.H.S part of this figure, the single vertical line is replaced by two parallel lines.
188. (d): The figure is replaced by a figure with one less number of sides and this figure is placed inside a circle.
189. (d): Each triangle in the figure is replaced by a rhombus.
190. (a): The figure is duplicated
191. (a): The inner two figures interchange positions and the outer figure is removed.
192. (c): The two circles along the diagonal from upper left to lower right corner are removed and a circle is placed at the centre. If the two circles are white then the new circle will be black and vice-versa
193. (d): A triangle is placed inside the figure with the base of the figure as its base.
194. (d): The figure is laterally inverted and the black circle is made white.
195. (d): One fourth part of each element in the figure is lost.
196. (6): The figure is laterally inverted.
197. (a): The figure is rotated 45° ACW.
198. (c): The figure is laterally inverted.
199. (a): Two adjacent sides of the figure are removed and the other two sides are brought to the centre
200. (c): The figure is inverted or laterally inverted so that the direction of the arrow is reversed.
201. (c): The two equal halves of the figure are and laterally inverted and brought together to form a closed figure.
202. (6): The circles are converted to equilateral triangles and the ellipses are converted to scalene triangles and vice-versa. (This is a question on inverse relationship).
203. (c): One horizontal and vertical lines are removed from the figure.
204. (d): The figure is inverted and dots are placed at each one of its vertices.
205. (c): The figure is replaced by a figure with two sides more and the new figure is shaded
206. (c): One of the two similar elements on the top is removed. The lines emerging from the lower element are turned inwards and a similar element appears. Both these elements are then connected to the upper element.
207. (b): A triangle is placed inside, if the initial figure is a quadrilateral and a quadrilateral is placed inside, if the initial figure is a triangle. (This is a question of inverse relationship).

Anatofi

208. 1d); The end point of each one of the lines is joined to the end point of the adjacent lines, so as to form a closed geometrical figure
209. id): The figure rotates 45° CW and is placed inside a triangle touching its base
210. (c): The inner figure is replaced by a figure with one more number of sides and thin inner figure is shaded.
211. (d) : The curved lines are converted to straight lines.
212. (6): The figure is rotated through 90°. The small line perpendicular to the longer line is removed if it exists and is placed if it does not exist.
213. (d): Each one of the figures is replaced by a figure with one more number of sides. The vertical line is replaced by two horizontal lines and the region between these two lines is shaded.
214. (c); The figure is laterally inverted
215. ib): Only the shaded portion of the figure remains and it rotates 90° CW.
216. (6): The figure gets laterally inverted
217. (6): The figure is divided into two equal parts and the lower part is placed above the other part.
218. (d): The figure is inverted and its upper and lower ends are encircled.
219. <c): The circles are converted to ellipses*.
220. (6): The contents of the outer square are rotated 45° ACW.
221. (c): The upper and the lower elements in the centre are inverted and joined to form a single element which is placed on the top. The two arcs on the sides, are laterally inverted and joined to form an ellipse which is rotated through 90° and placed below the initially formed figure. One of the two remaining similar elements is removed and the other is placed at the bottom.
222. (a) The figure is rotated through 180°
223. (a): The number of sides in the figure is increased by one and the number of lines inside the figure is reduced by one.
224. (c): The inner and the outer figures interchange positions by enlargement of the inner figure and the decrease in size of the outer figure. Also the figure that gets in, is shaded by dots.
225. ic): The figure is intersected by a similar small figure.
226. Id): Either the top or the RH S. pin is removed and the remaining figure is rotated 90° CW and half of the heads of both the pins are made black.
227. (a): The outer figure is replaced by a figure with one less number of sides and the circle inside the ellipse moves to the opposite end.
228. (6) The whole figure is rotated 90° CW. The outer figure is horizontally divided into two equal parts which are then individually inverted.
229. (c): The number of crosses remains the same and the number of circles increases by one
230. (a) I The figure* is divided into two equal parts about a horizontal line and the two parts are inverted and joined to form the new figure.
231. (a). The element attached to the main figure, gets attached to the other end of the same side of the main figure
232. t6>: One of the similar figures at the lower end of the main figure gets attached to the upper end and the other element rotates through 90°.
233. (c): The outer figure is replaced by a figure with one side more than the inner figure. And the inner figure is replaced by a figure similar to the outer figure.
234. (d): The inner figure is rotated 90° CW and is made to intersect the outer figure and a similar figure is made to intersect at the opposite end of the outer figure
235. id>: One of the lines near each side of the figure, is brought inside and all these lines are joined to form a closed figure.

For Competitions

- Dr. R.S. Aggarwal
Monika Aggarwal

✓ An ideal book for Bank P.O., S.B.I.P.O., R.B.I., M.B.A., Hotel Management, C.B.I., I Tax & Central Excise, U.C.A.A.O., G.I.C A A O , Asstt. Grade, Section Officers, U.D C , Railways, N.D.A., C.D S. etc

12r Over 10.000 Questions on Comprehension. Sentence & Passage Completion, Synonyms, Antonyms Rearrangement, Spotting Errors, Sentence Correction. Idioms & Phrases, One word substitution etc.

vV Previous year's questions included.

ANSWERS (EXERCISE 2B)

- 1.(5): R.H.S. fig. has the same number of sides as the number of arrows in L.H.S. figure.
2. (3): The L.H.S. figure is enlarged and a similar inverted figure is placed inside it, so as to form the R.H.S. figure
- 3.(2): The L.H.S. figure is inverted upside down to form the R.H.S. figure.
- 4.(5): The L.H.S. figure is rotated 135° ACW to form the R.H.S. figure.
- 5.(/): All the elements in the L.H.S. figures are different. The innermost element becomes the middle element; the middle element is inverted and made the outermost element and the outermost element is made the innermost element. This gives the R.H.S. figure.
6. (4): Tho L.H.S. figure is inverted and enlarged to form the R.H.S. figure.
7. (4): The L.H.S. figure is rotated 90° CW and a duplicate copy of it is placed in the same direction just below it to form the R.H.S. figure.
8. (3): The L.H.S. figure rotates 90° CW. The symbol that reaches the lower left position gets inverted and the symbol that reaches the upper-left position gets replaced by a new one. This gives the R.H.S. figure.
- 9.(1):** The number of sides in the L.H.S. figure increases by two and the number of lines inside and outside increases by one. This forms the R.H.S. figure.
- 10.(5): The L.H.S. figure is inverts and duplicated to form the R.H.S. figure
- 11.(3): The upward inverted image of L.H.S. fig. is attached to it to form the R.H.S. figure
12. (4): The L.H.S. figure is rotated through 180° and the element at its end is made white so as to obtain the R.H.S. figure.
- 13.(4): The outer element is rotated through 90° and decreased in size while the inner element is enlarged to form the outer figure. This gives R.H.S. figure from the L.H.S. figure
- 14.(3) The L.H.S. figure is inverted and duplicated to form the R.H.S. figure.
- 15.(3) The R.H.S. figure contains one side more than the L.H.S. figure.
18. (1) All the elements in the L.H.S. figure move two steps CW. The upper left element in the L.H.S. figure gets laterally inverted; the upper-right element gets inverted, the lower-right element rotates 90° ACW and the fourth element gets replaced by a new one. This forms the R.H.S. figure.
- 17.(J): Tho outer element of L.H.S. figure is removed and the inner element is enlarged to form R.H.S. figure. v
- 18.(2): The number of sides in the R.H.S. figure is one less than the number of radii in the circle in the L.H.S. figure.
- 19.(/): The L.H.S. figure is rotated through 180° to form the R.H.S. figure.
One of the two similar elements in the L.H.S. figure is removed and the other element is rotated 90° CW to form the R.H.S. figure.
20. (5): All the arrows in the L.H.S. figure rovers* their directions to form the R.H.S. figure.
- 21.(4): figure.
Both the elements of L.H.S. figure are replaced by elements with one more number of sides. The pin gets inverted and moves to the next corner ACW. Another pin with head pointing towards the first pin also appears
- 22.(2): The L.H.S. figure and **is** laterally inverted image are put together to form the R.H.S. figure.
- 23.(3): The L.H.S. figure is rotated 90° CW and duplicated to form the R.H.S. figure.
- 24.(2): The LH.S. figure is inverted and enlarged and a figure similar to the L.H.S. figure is enclosed in it. This forms the R.H.S. figure.
- 25.(2): The upper element in the L.H.S. figure is rotated 90° CW and the lower element is rotated 90° ACW to form the R.H.S. figure.
26. (5):

- fig formed. The lines are placed alternately inside and outside the fig. This forms (II).
24. (4): In all other pairs, (I) is laterally inverted, the larger portion is made small and the small portion is enlarged, the bent arrow is inverted and the arrowhead is also inverted, to get (II).
25. (3): In all other pairs; the inner part of the fig. in (I) is divided into two and the two parts are laterally inverted. The outer enclosing fig. is reduced in size and placed between the two parts. This gives (II).
26. (3): Except in (3), in all other figures one line is added to <I> to form (II).
27. (3): The first figure is inverted, moved ACW and two more leaves are added to it to form the second figure.
28. (2): In all other pairs, the second element is exactly half of (I).
29. (5): In all other pairs, out of the outer 16 lines, ten lines are removed from (II) to form (II).
30. (4): In all other pairs, the arc moves to the adjacent side ACW and rotates through 180° while the pin moves through one and a half sides of the square in an ACW direction. This forms (II) from (I).
31. (5): In all other pairs, the first element rotates 45° CW to form (II).
32. (J): In all the pairs, except **IX** each one of the half-shaded squares is rotated 90° ACW to form (II) from (I).
33. (2): In all other pairs, the fig. in (I) is replaced by a new fig. with one more side and the same number of lines as the number of sides in (I) is introduced to form <II>.
34. (3): In all other pairs, lines are removed either from similar positions on the four sides, or from consecutive positions or with a gap of one line.
35. (5): In all other pairs, (II) is obtained by adding line one or one leaf to (I).
36. (J): In all other pairs, one of the three symbols is replaced by a new one.
37. (5): In all cases, except (5); the shading moves to the vertically opposite position.
38. (3): In all other pairs, the shadings move two steps ACW.
39. (4): In all other pairs, the two symbols in first element interchange positions and sides to form (II).
40. (5): In all other pairs, the symbols in (I) move in the order  and the symbol that reaches the upper right position gets replaced by a new one and the symbol that reaches the upper left position gets inverted. Thus, (II) is formed.
41. (1): In all other pairs, the symbols move in the order **LJ**. The symbol that reaches upper right position rotates 90° CW; the symbols that reach the upper-left and the lower-right positions get inverted and the symbol that reaches the lower-left position rotates 90° ACW. Thus, (II) is formed from (I).
42. (/): In all other pairs, all the arcs except the one in the lower right position, get inverted to form (II) from (I).
43. (5): In all other pairs, one line is added to each one of the complete or incomplete squares to form the second figure from the first one.
44. (3): In all other pairs, the unshaded portions of (I) are shaded while the shaded portions are made un-shaded, to obtain (II).
45. (4): In all other pairs, the outer cup in (I) rotates 45° ACW and the inner fig. rotates 90° ACW and gets inverted or laterally inverted to form (II).
46. (1): In all other pairs, all the incomplete squares in (I) are completed and a new complete square is added to form (II).

Hidden page

- 69. (4):** In all other pairs, the diagonally opposite symbols in <D interchange positions. The new upper left symbol gets laterally inverted; the lower right symbol gets inverted upside down; the upper right symbol rotates 90° ACW and a new symbol appears at the lower left position.
- 70. (4):** In all other pairs, (II) can be obtained from first by moving the symbols in the order shown below or in orders obtained by rotating the following order through

90° or 180°

The symbol at the encircled position get* replaced by a new one.

TYPE 5 : DETECTING THE RELATIONSHIP AND CHOOSING THE CORRECT SUBSTITUTE

This type of questions contains figures A. B. C and D in the Problem Set and figures 1, 2, 3 and 4 in the Answer Set. It is required to select a figure from the Answer Set which best substitutes fig. D of the Problem set such that element D is related to the element C in the same way as element B is related to element A. If none of the answers is suitable then answer is 5.

Example : PROBLEM FIGURES

ANSWER FIGURES

Solution : Here, two triangles from fig. (A) are lost to form fig. (B). With this relationship we find that with the loss of two triangles from fig. (C), fig. (3) will be formed. So, fig. (3) is the answer.

EXERCISE 2E

Directions : Each of the following questions bears four figures numbered A, B, C and D which constitute the Problem Set and four other figures numbered 1, 2, 3 and 4 which constitute the Answer Set. Figures A and B are related in a particular way. Establish a similar relationship between figures C and D by choosing a figure from the Answer set that would best substitute fig. (D) in the Problem set. In case if none of the figures of the Answer set is suitable then answer is 5.
