

10. PAPER FOLDING

The problems based on paper folding involve the process of selecting a figure which would most closely resemble the pattern that would be formed when a transparent sheet carrying designs on either side of a dotted line, is folded along this line. The figure has to be selected from a set of four alternatives.

Directions : In each one of the following examples, find from amongst the four response figures, the one which resembles the pattern formed when the transparent sheet carrying a design is folded along the dotted line.

Example 1 :

Solution : The right halves of the response figures being dotted, indicate that the right half of the transparent sheet has been folded and placed over the left half. Visualising the combination of the designs on the two parts, we obtain fig. (D). Hence, fig. (D) is the correct answer.

Example 2 :

Solution : Clearly, the lower half of the square sheet has been folded over the upper half. Hence, the bent line in the lower half will be inverted over the other half so that a V shaped figure is formed. Hence, the answer is (B).

Example 3 :

Solution : The circular sheet of transparent paper has been folded along the dotted line such that left half overlaps the right half and consequently the smaller arrows will appear to penetrate inside the larger ones. Hence, fig. (C) is the answer.

Example 4 :

Transparent Sheet

Response Figures

Solution : Here, the sheet has been folded diagonally and the designs on the either side of the dotted line combine to form fig. (D).
Hence, fig. (D) is the answer.

EXERCISE 10

Directions : In each one of the following problems, a square transparent sheet with a pattern is given. Figure out from amongst the four alternatives as to how the pattern would appear when the transparent sheet is folded at the dotted line.
